PROFILE

Started in power plant automation and model predictive control, then developed anomaly detection, forecasting, and computer vision models for energy and manufacturing. Led RAG, agent, and Text-to-SQL services for enterprise clients, and now leads GenON's Physical AI humanoid product, GenP, from product definition to VLA training pipelines.

SKILLS

Programming	Python for ML and services, C/C++ for control and embedded code, plus SQL and TypeScript.
AI/ML	LLM agents and RAG with LangChain/LangGraph, LiteLLM, OpenRouter, FastMCP, and Braintrust; anomaly detection, time-series forecasting, and computer vision with PyTorch and scikit-learn.
Robotics	Humanoid development on Unitree G1 and AgiBot X2 SDKs, VLA training, simulation in Isaac Lab and MuJoCo, and SLAM-based navigation.
Serving & Infrastructure	Model and LLM serving with FastAPI, vLLM, and Ollama on Docker and AWS, with MLflow, PostgreSQL, and vector databases (pgVector, Qdrant).
Domains	Energy and utilities (thermal power, renewables, ESS), petrochemical and steel processes, manufacturing, healthcare, and industrial automation (PLC, DCS).

EXPERIENCE

2026 – Present
GenON, R&D Group — Director / AI Product Engineer
Lead the Physical AI humanoid product as Product Owner (PO), defining the product, technology tree, and commercialization roadmap, and manage client projects as Project Manager (PM). Design the integrated architecture for voice conversation, scenario execution, VLA, VLN, navigation, and motion, and build the robot control panel. Propose and run new Physical AI and agent-system projects and hire talent.

2024 – 2025
PwC Consulting, Digital & AI — Director / Senior ML Engineer
Developed generative AI services (RAG and agents), ML-based equipment diagnostics, price and demand forecasting, and control optimization. Proposed new projects, ran AI training for firm-wide and division staff, and hired talent.

2023 – 2024
MakinaRocks, AI Project Team — Part Leader / Senior ML Engineer / PO
Developed anomaly detection, control optimization, and guidance models as well as RAG-based services, and supported LLMOps and MLOps environment setup. Planned new projects, improved the traceability and reproducibility of project deliverables, researched ML technology trends, and hired talent.

2021 – 2022
Samsung Electro-Mechanics, Equipment Technology Research Institute — Principal Researcher
Built a software platform for data-driven anomaly detection and predictive maintenance and for running deep learning models. Analyzed and visualized manufacturing equipment performance and logistics data, and taught data analysis to employees.

2010 – 2020
KEPCO (Korea Electric Power Corporation), Data Science Lab — Senior Data Scientist
Researched anomaly detection algorithms, time-series forecasting, and deep learning, including sequence and generative models. Built the AI and data science roadmap, identified and planned new research projects, and planned research infrastructure and analytics environments.

2008 – 2010
POSCO E&C, Energy Business Division — Automation Design Engineer
Designed electrical and automation systems for power and energy plants, designed and built data acquisition infrastructure, developed control algorithms, and supported commissioning.

EDUCATION

2006 – 2008 **M.S. in Electrical Engineering** KAIST

1999 – 2006 **B.S., School of Electrical Engineering** Pusan National University

SELECTED PROJECTS

2026 – Present

GenP Physical AI Humanoid Product

GenON

- Own the product as PO, writing the product definition and commercialization roadmap around a common core + domain profiles structure.
- Architect a single workflow that integrates voice conversation, VLA manipulation, SLAM navigation, and whole-body control, and design and build a control panel for robot registration, monitoring, logs, alarms, task execution, and emergency stop.
- Lead the data and model pipeline, from Teleop data collection to VLA training and evaluation and a simulation environment for validation.

Unitree G1 · Unitree SDK · LeRobot (VLA) · Isaac Lab · MuJoCo · FAST-LIO2 · FastAPI · React · Next.js

2026 – 2027

Docent Humanoid Robot for a Brand Experience Center Planned

GenON · Global F&B company

- Manage the project as PM, defining scope, WBS, and acceptance criteria and running kickoff and interim reviews.
- Design the architecture for voice conversation (STT/TTS), tour scenarios, SLAM-based autonomous navigation, and a LiDAR/depth collision-avoidance safety system.
- Build a control dashboard for robot status and alarms, scenario execution, language settings, and E-Stop.

AgiBot X2 Ultra · AgiBot SDK · SLAM · FastAPI · React · Next.js · External STT/TTS APIs

2025

SCM Data Analysis and Work Support Service

PwC Consulting · Samsung Electronics

- Led the project end to end and designed the service architecture and agent workflows built on Text-to-SQL.
- Deployed the service and managed its operation.

Qwen 8B (fine-tuned) · Llama 3.1 70B · LangChain · LangGraph · Hugging Face · vLLM · Milvus · LiteLLM · Braintrust

2024 – 2025

Online Consultation and Product Recommendation Assistant

PwC Consulting · Samsung Electronics

- Led the project end to end, designed the service architecture and agent/RAG workflows, and deployed and operated the service on Azure.
- Established an evaluation framework for the RAG service and built a program to automate evaluation.

Microsoft Azure · Azure AI Search · Python · LangChain · RAGAS

2024

Raw-Material Price Forecasting and Market Analysis Dashboard

PwC Consulting · LOTTE Fine Chemical

- Framed price forecasting as supervised regression over about 150 candidate attributes and compared Linear Regression, Random Forest, XGBoost, and LSTM against a rule-based benchmark.
- Cut forecast error (MAPE) from 5.9% with the rule-based method to 1.3%, with multi-horizon forecasts 1–4 weeks and 1–3 months ahead.
- Built a four-page dashboard (Upload, EDA, Training, Dashboard) with SHAP-based driver analysis, letting business users upload data and retrain models themselves.

XGBoost · scikit-learn · SHAP · Streamlit

2024 – 2025

Green-Material Inventory Blend Optimization

PwC Consulting · LOTTE Fine Chemical

- Delivered one of three PoCs selected under the company-wide AI master plan, alongside raw-material price forecasting and an LLM-based service platform.
- Developed an optimization approach for choosing blend combinations from green-material inventory.
